

# CASE STUDY - BIRD NETTING BRIDGE

## New York Overpass Underside of Bridge

### PEST BIRD SPECIES: PIGEONS

- ✓ Several hundred pigeons nesting under bridge.
  - Years of bird droppings and nesting
- ✓ Heavy nesting materials on concrete columns and metal I-beams.
- ✓ Small population of non-target birds (Sparrows)
- ✓ Ample food/water supply in area

### BIRD CONTROL METHOD: BIRD EXCLUSION NETTING

- ✓ Black ¾" Bird Exclusion Netting was installed to exclude target pest bird (Pigeons) as well as (Sparrows)
- ✓ System completely removable.
- ✓ ZERO penetrations into the structure
- ✓ Clamp/Rod system allows access panel to be opened for complete access behind the netting for bridge inspections.
- ✓ Minimal visual impact

### PROJECT PHOTOS

- ✓ Complete steel frame construction
- ✓ Zero penetrations into the bridge structure
- ✓ Complete access behind the netting
- ✓ Complete bird EXCLUSION for all pest birds
- ✓ Contact Aviaway for all your Bird Control Projects.
